ACTIVA TRAINING CENTER

EVALUATION OF SKILLS COMPETENCIES

Student Name Adrian Diaz Nunez

Dates 8/14/24 to 6/10/25

The evaluation skills competencies Checklist is one of the most important documents of the Associate Degree Program. It serves as a transcript and provides evidence that the curriculum included learning opportunities to develop the skills needed to function as a registered nurse.

Guidelines:

1. Skills will be completed by the deadlines specified in course syllabi.
2. By the end of the course, students must demonstrate satisfactory skill performance.
3. Re-testing will be required if skill level performance is unsatisfactory.
4. Once mastered, the instructor will sign the skill with their initials. All instructors' initials and complete signatures must be dated to attest to the student's teaching and satisfactorily demonstrated performance objectives.
5. For you to complete all program requirements at the end of the program, the completed checklist must be submitted as part of the nursing portfolio.

You have the opportunity to practice independently, with your peers, with lab assistants, and with faculty to develop these skills. How much time you dedicate to practice is dictated by how quickly you learn and the difficulty level of the skills.
